ArtFlow
Process-oriented Art Journaling App for Visual Artists

Quinn Luong '21 | Advisor: Dr. Ewa Syta | Department of Computer Science, Trinity College

Motivations

- Artists record the work in progress (WIP) of their art projects but there does not exist an application for this purpose
- Existing platforms to upload art like DeviantArt are too focused on the end goal rather than the process of making art
- Artists usually store their WIP in their phone photo album, which is mixed up with other photos
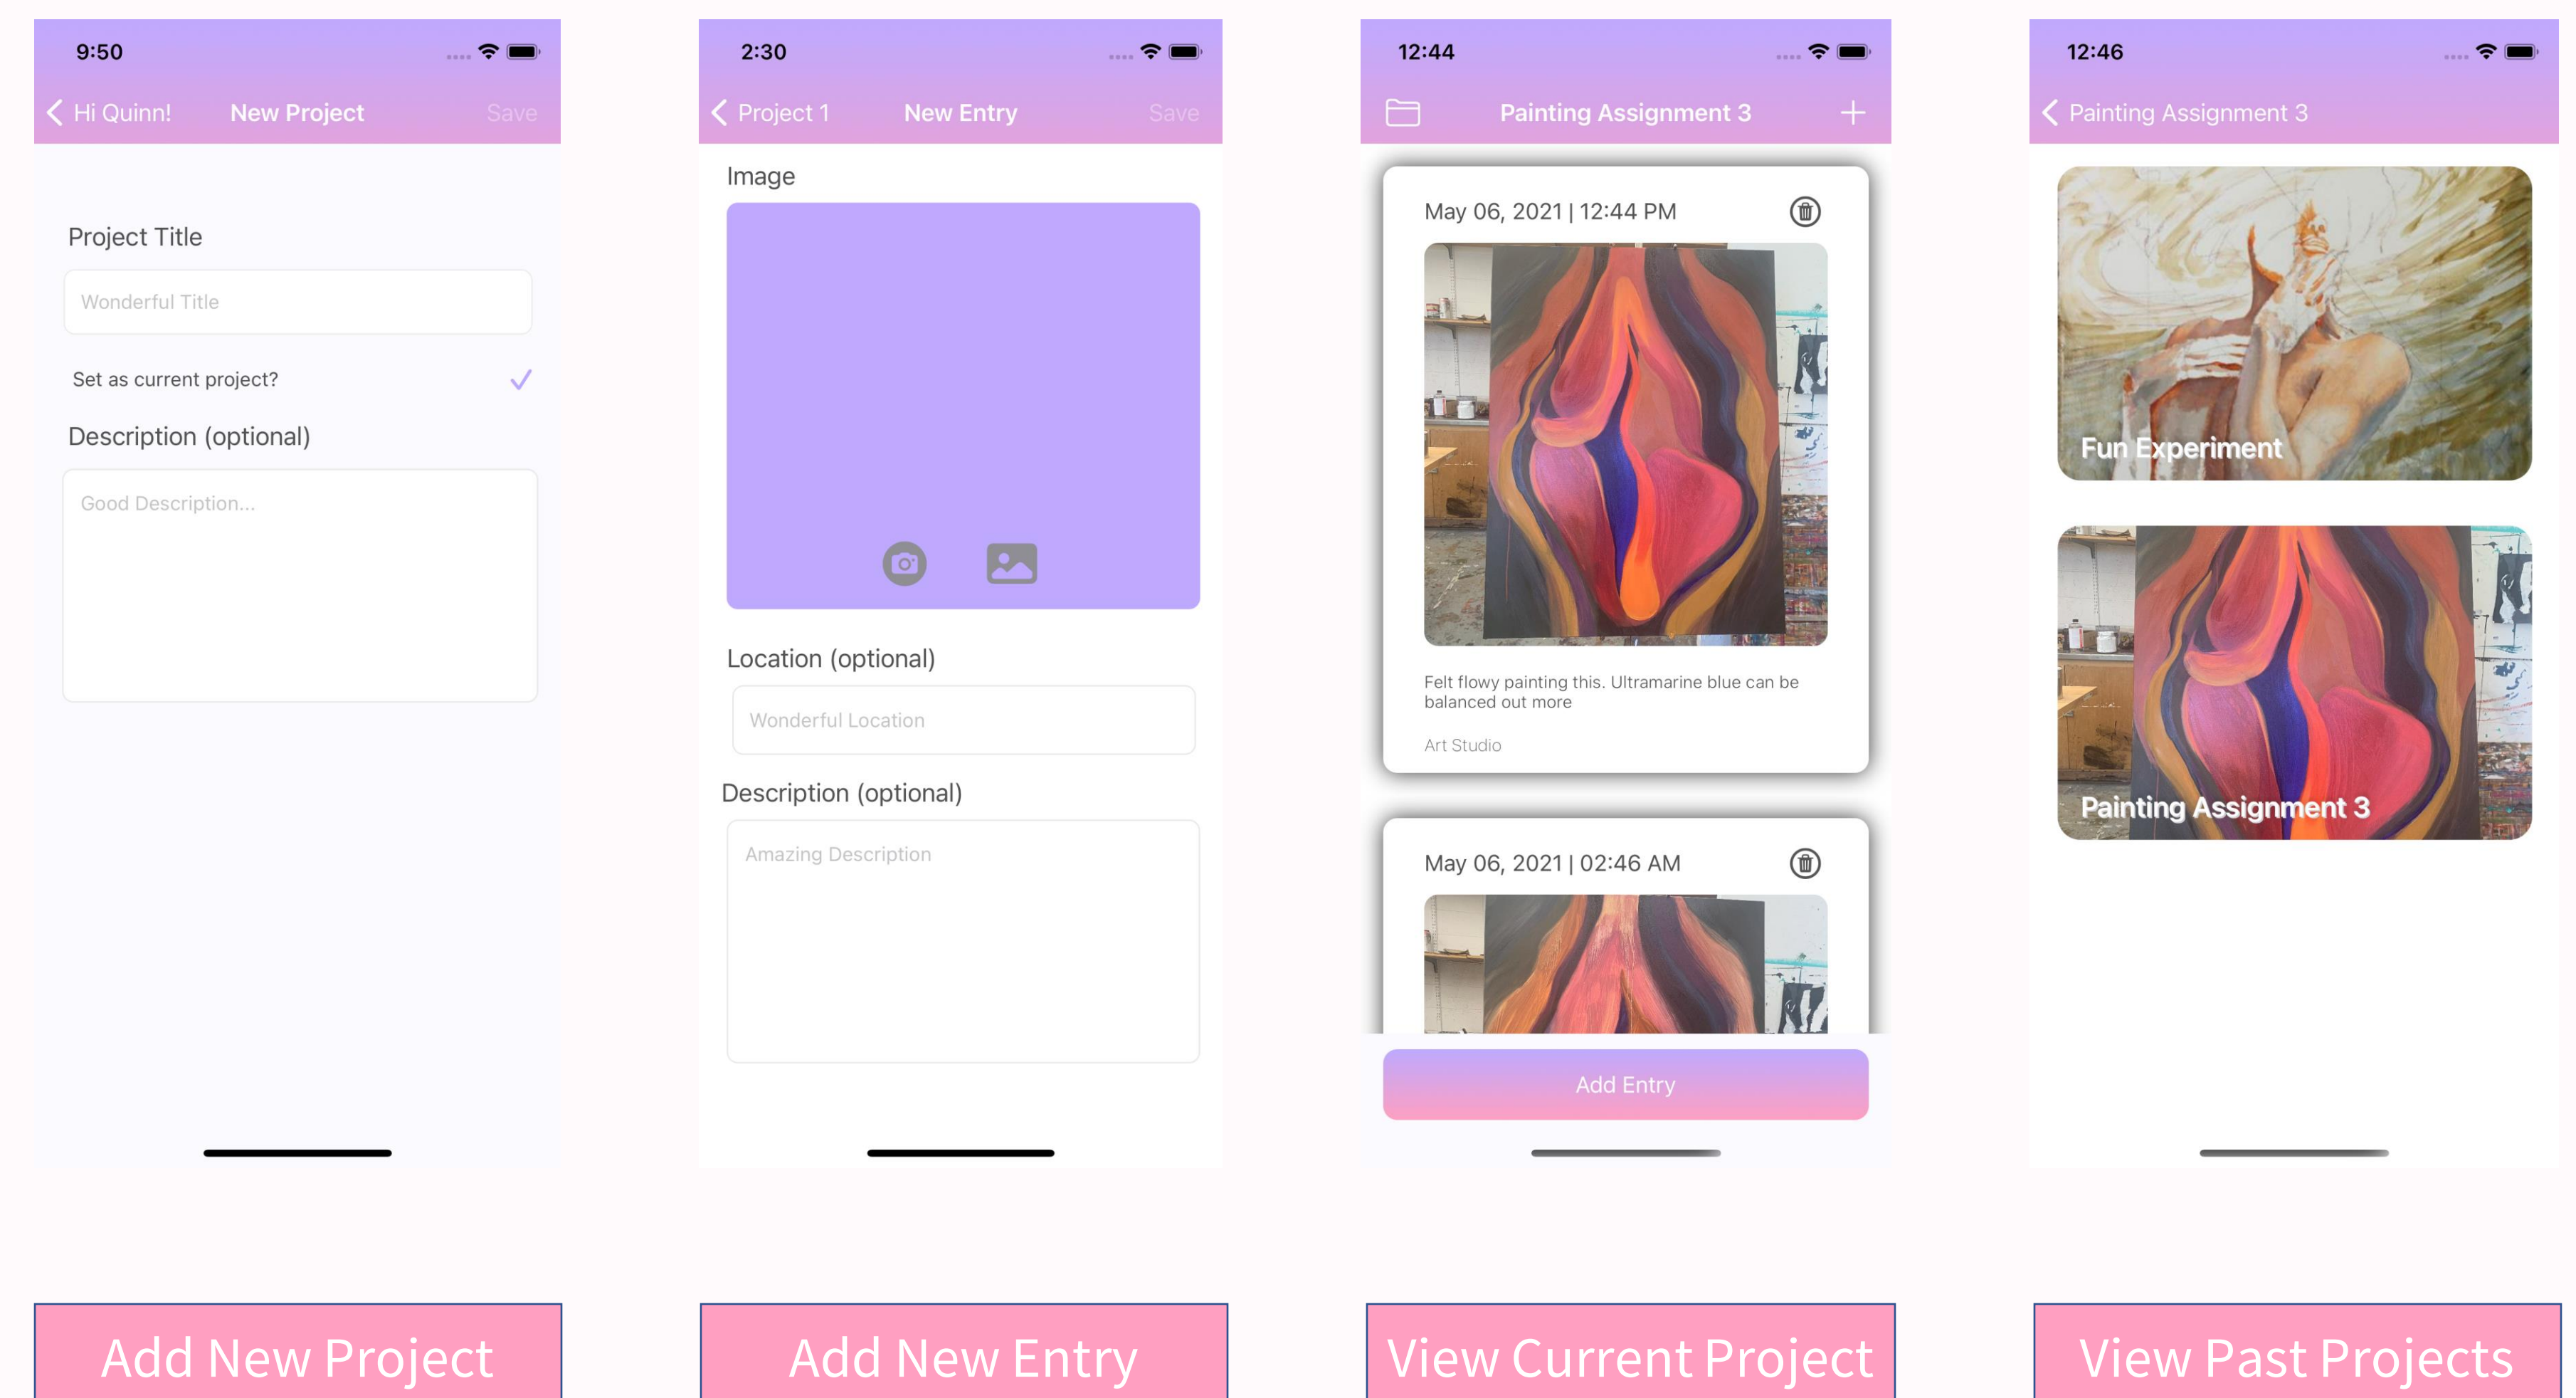

Project Overview

ArtFlow enables users to:

- Capture or upload multiple photos of the WIP for an art project
- Add notes along with the uploaded photos to record thoughts and reflections
- View past art projects
- Continue to work on a past project if desired

Key Features

Add New Project · Add New Entry · View Current Project · View Past Projects

Significance

- Provides a central storage space for their art projects

- Prioritizes the importance of an explorative process rather than the end goal

- Serves as a personal space for artists to freely upload whatever they want without external expectations
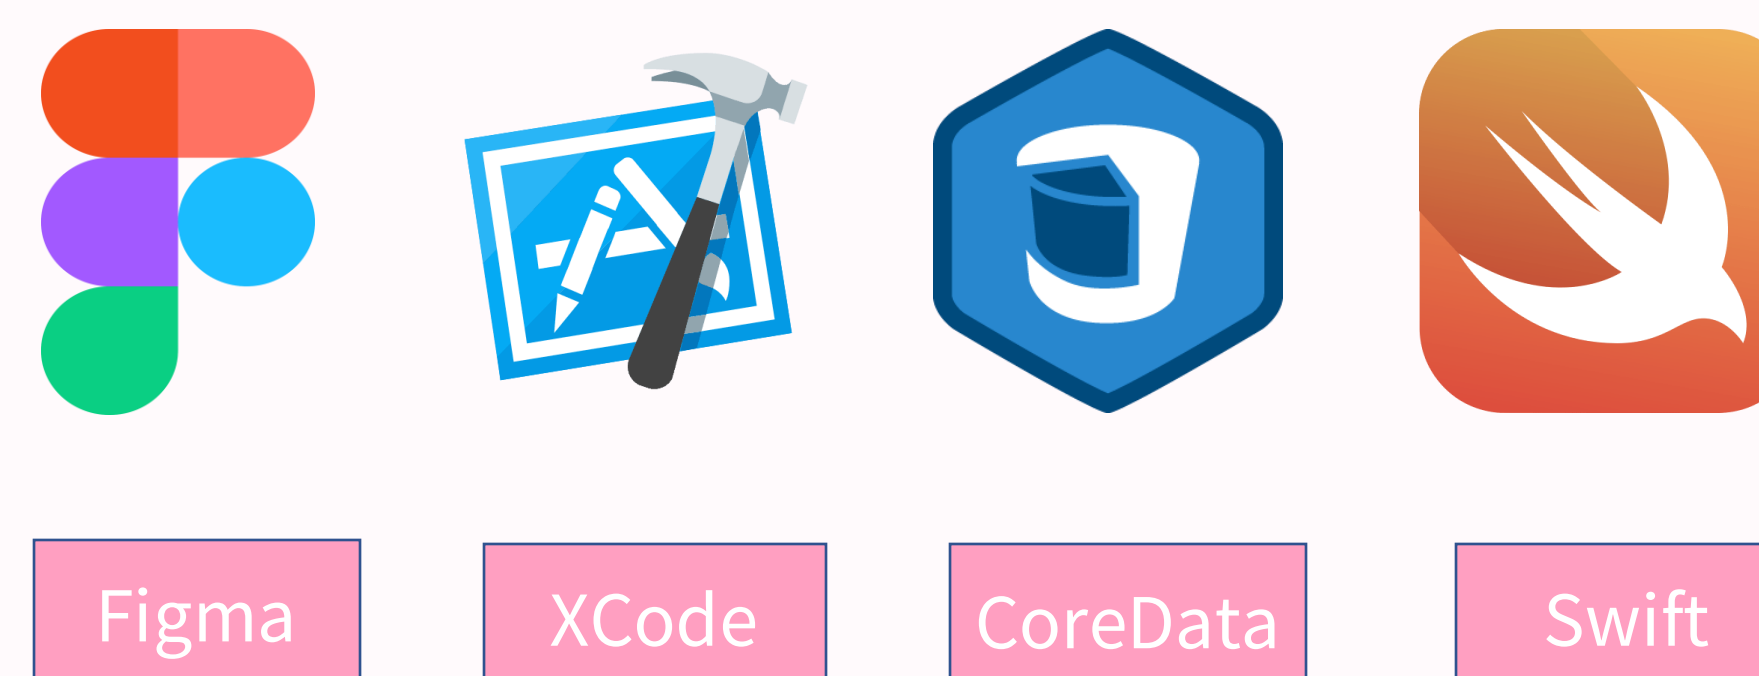

Technologies Used

Figma · XCode · CoreData · Swift

Further Work

- App development for Android and tablets

- Cross-platform synchronization

- Functionality to share artwork on platforms like Instagram and DeviantArt
